

**With ORGANIC &
NATURAL ingredients.**

**You can finally have fun in the sun
even with sensitive skin!!**

While there are a number of sunscreens on the market that claim to be ‘natural’ or ‘safe’ for watery ecosystems, most fail to live up to their promises. Detailed studies show coral reefs and watery ecosystems around the globe are under incredible stress due to climate change as well as pollution from some of the common chemicals found in most sunscreens.

We use certified organic ingredients in our products and seek the highest possible medicinal quality in all of our herbs.

By purchasing organically grown herbs, oils and raw materials, we are ensured that our ingredients were not poisoned with harmful pesticides, herbicides or chemical fertilizers. All ingredients are sourced for their quality and sustainability and are always organic when available. Going a step beyond organic on our own farm and “herbal test garden,” we are committed to wild land farming that protects wildlife habitat, conserves water, attracts beneficial insects and birds, and builds healthy soil for the future.
